

What are healthcare-associated infections?

Healthcare-associated infections are a result of germs entering your body during medical care.

Catheter-associated urinary tract infections

When germs travel along a urinary catheter and cause an infection in your bladder or kidney.

Surgical site infections

An infection that happens after surgery in the part of the body where the surgery took place.

Bloodstream infections

When germs enter the blood by way of a catheter or tube that is placed in your vein.

Pneumonia

Infection of the lungs.
